Discrete Solutions for Extreme Environments

Learn more at Hall C2 - Booth 178

Discretes do matterTM

Since 1974, Central Semiconductor has been the go-to manufacturer for customers around the world who want innovative and reliable discrete semiconductors. Central offers in-house up-screening solutions to ensure the highest quality devices for the most demanding high reliability applications. To best suit the constantly changing requirements of designers, up-screening and complete design solutions are available for both bare die and packaged devices.

spacelliteTM

Spacellite discrete semiconductors are devices designed to meet the reliability and functionality specifications for today's modern satellite applications.

why spacelliteTM

- Reduced cost without compromising quality or reliability
- Meets Space 2.0 methodology and directives
- Ideal for low Earth orbit (LEO) applications for the latest satellite technologies
- Equivalent to MIL-PRF-19500 and MIL-PRF-38534 devices

SUPER INDUSTRIALTM

Super Industrial devices are ruggedized versions of standard commercial and industrial products with upgraded options, including custom interconnect, packaging, and customer-specific testing.

- Improved end product tolerance to extreme environmental conditions
- Improved product reliability
- Alternative to standard industrial or military devices
